ABOUT US

The company philosophy strikes a balance between innovative design solutions and a focus on quality construction outcomes.

OUR STORY

With over 30 years experience in both design and construction, Broadworth Modular has become a leader in the prefabricated building industry throughout New South Wales.

The Broadworth Group has an extensive history in offering high end construction services for all modular building projects, ranging from residential, educational, commercial, mining and government buildings. In particular, Broadworth specialises in wholesale supply of manufactured homes for all large scale land lease projects within existing estates or greenfield sites.

Our directors consist of David Goldsmith, who studied architecture at the University of Sydney, with over 40 years of experience in the industry, and Stephen Bradshaw, a licensed builder with over 25 years experience in the construction industry. The company philosophy echoes this relationship, with a balance between innovative design solutions and a focus on quality construction outcomes.

OUR FOCUS

At Broadworth Modular our key focus' are:

- Attention to detail during the entire construction period
- Predictable time frame and project costs
- Low impact, environmentally friendly and efficient final products
- Quality and value for money for our clients
- Smart design with sustainable design principles
- Design for comfort, lifestyle, personality and longevity
- Creative problem solving and engineering
- Innovative construction techniques and processes
- Time efficiency throughout the construction process
- Collaboration between builder, architect and client

THE FACTORY AND SPECIALISATION

Our company, based on the Central Coast has a factory in Berkeley Vale in which all of our buildings are fabricated, employing over 50 personnel and subcontracted tradesman. Recently, Broadworth has expanded its operation and created two subsidiary companies, Australian Steel Framing & Envision Kitchens, fabricating light gauge steel frames and kitchens and joinery. This gives Broadworth the ability to fabricate all structural steel for our homes within the factory, along with all kitchens, vanities and joinery, making the building process extremely efficient.

COMPLETE FLEXIBILITY IN DESIGN

Envision Kitchens are a subsidiary of Broadworth Modular. Through offering fresh and innovative design solutions with quality finishes, Envision has become a premier kitchen design and custom joinery company on the Central Coast.

The ability for Broadworth Modular to have all kitchens, vanities and joinery designed and fabricated in-house makes our building process much more efficient, whilst allowing for custom details to be worked through for any complex projects or custom homes. Envision offer a number of materials and finishes, from budget through to luxury which satisfies all clients' differing needs and price points.

Envision Kitchens is Broadworth Modular' latest expansion and is an ever growing business, taking on outside work on top of Broadworth Modular' requirements.

envision
KITCHENS

SUPERIOR TECHNOLOGY AND ACCURACY

Australian Steel Framing are a Central Coast based producer of quality steel frames and trusses.

Our state of the art factory facility houses our innovative technologies which contribute to the prefabrication stage of construction for all of our projects. These include a Computer Numerical Controlled steel frame manufacturing plant along with various structural steel engineering tools that our experienced team use to design and create all structural members for every building that comes through our factory.

All design, engineering and fabrication is done in house to ensure the highest quality of construction. Our design experts and engineers work from their studio within the factory and are always on site during the construction of every building.

Australian Steel Framing only use quality TRUECORE® steel and all our Steel Frames are manufactured onsite in Australia in our Central Coast based factory.

WHY MODULAR?

PREDICTABLE COST

A controlled and fixed price is adopted at the beginning of our construction process which is coupled with cost effective design strategies to reduce construction costs. These strategies include:

- 1 Economical planning to ensure minimal material wastage
- 2 Minimal site works and costly in situ construction methods
- 3 Reduced length of construction
- 4 In house engineering and steel frame manufacture
- 5 Volume stock of standard building materials at wholesale prices which are passed onto client.

COMPRESSED TIME FRAME

A major benefit of modular construction is the ability to commence works on the prefabricated elements in the factory, whilst the in situ, on site elements commence on site. This crossover results in a compressed time frame that's far quicker than a standard, chronological building process. This benefit makes modular construction a perfect solution for difficult sites, remote location and congested urban sites where construction is difficult and expensive.

SUSTAINABILITY

Our sustainable construction processes involve economical material usage, minimal wastage, minimal on-site impacts and quality control within the factory environment. Our design team works with consultants and architects to minimise our ecological impact and improve the performance of our buildings with sustainable design principles.

DESIGN & CONSTRUCTION CAPABILITIES

Our in house design, engineering and fabrication team allow us to produce smart solutions to complex architectural forms and functional requirements. Our state of the art factory manufactures nearly all structural elements of our buildings using Computer Numerical Controlled (CNC) technology and a team of dedicated industry professionals help craft any form or shape. This is why we regard ourselves as the perfect builders for architects with bespoke architectural designs and complex structural systems.

**Please note these specifications are part of our standard inclusions and form the basis of our pricing structure.
We cater to any construction specification, standard or materiality that you desire or your site requires**

TESTIMONIALS

We have always found their product to be of the highest quality at a very cost effective price.

Broadworth Modular has supplied over 150 homes to us since 2007. We have always found their product to be of the highest quality at a very cost effective price. They provide bespoke homes which are well thought out and easy to live with. They provide ongoing support throughout the building process from start to finish and ensure the products they use stand the test of time. We have homes over 10 years old which still look as fresh today as the day they were installed.

I would highly recommend Broadworth Modular to build you a home which will be of a high quality and extremely cost effective over the lifetime of the building.

Peter Luxford
Village developer for Hampshire Villages.

Broadworth Modular has maintained a successful and appreciated business relationship with Greenlife Development Pty Ltd for many years. In that time all staff at Broadworth have designed and built the high quality product that Greenlife requested. I am thankful for good service and look forward to many more years working with Broadworth Modular

Paul Craig
Director and Owner
Greenlife Village Erina

I am very confident in recommending Broadworth Modular to all of my clients knowing full well I have the backing and support of a team of highly skilled tradesman guided by a professional management team.

I write to express my appreciation at the level of professionalism and overall support offered to me by Broadworth Modular over the last 4 years. I have been involved in the manufacture and supply of high quality factory built classrooms for more than 25 years. During this time I have used a number of suppliers. There are two main factors that differentiate Broadworth Modular from the rest.

Firstly you consistently deliver a higher quality product than anyone else in this industry. The level of finish and attention to detail is superior to all other suppliers in the market.

Secondly, you have a no fuss approach to solving problems when things don't go exactly as they were planned. In any complex building project, there are always unforeseen events that come up. It is very important to partner with a company that will support you, and focus on achieving a high quality finished product at a reasonable cost.

I am very confident in recommending Broadworth Modular to all of my clients knowing full well I have the backing and support of a team of highly skilled tradesman guided by a professional management team.

Alex Cook,
Director
Team Sales Australia Pty Ltd.

With 100+ homes completed over the course of several years, we at Platinum Modular have and will continue to engage Broadworth as our preferred manufacturers of high quality steel framed modular homes in our Land Lease communities. As a wholesaler, Broadworth's attention to quality detail, design efficiency and scheduling requirements makes an ideal business relationship for Platinum Modular. We look forward to continuing to work with Broadworth Modular.

Paul Turner,
Platinum Modular Solutions.

CUSTOM HOMES

For complex or difficult sites that standard plans may not suit, our in house design team can develop custom designed plans for any project. We are also happy to meet with any clients who may have special requests or an idea for a plan in mind. Our 3D modelling software can show exactly what the home will look like by creating any roof form or house shape and applying any type of finish to each surface.
